Extended Warranty		List Price (GBP)
DMA-RDVEDW	RocketDVD-Pro Second Year Software Upgrades.	£325

DVD Dailies

Fully automate the entire DVD production of the DVD dailies process, direct from your NLE system. Simply export your edited files (avi, mov, wmv, mpg, vob etc) into a pre-defined watch folder. Once a file is detected, RocketDVD Professional immediately starts processing the project, adding any first play files (like your company trailer and copyright credits) and send the DVD to Rimage Production Unit. Within minutes a professional DVD with your own label including any pre-determined file information is ready.

Live Event DVD Production

Perfect for live events, optimised to create a fully authored DVD in a matter minutes after the event has ended. Menu styles and chapter points can be set up in advance but if things change, even while you're capturing the event, you can use the "Live Chapter Insert" feature to dynamically place chapter points in the program and you can even key in text relating to the chapter point (i.e. a song title) that will appear under the chapter point thumbnail on the DVD Scene menu. Points set up previously can also be edited and items such as meeting notes on PowerPoint or Image files can be pre-determined to be included on the burnt DVD.
